– Mutating Materiality

01. ***SoLiquid monster(s)***, *(In-progress)*
Physical Audiovisual installation & performance.

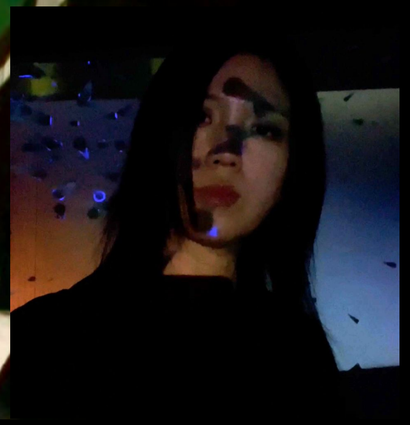

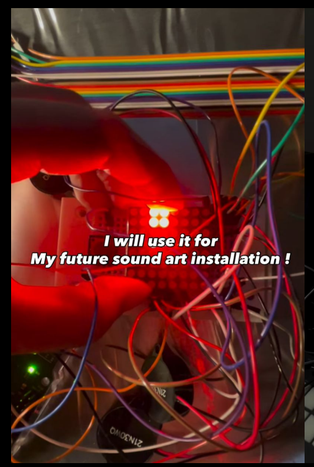

SoLiquid monster(s) constantly evolves based on reinforced memories, both happy and sad, perspectives on the world or framing on others and myself.
They are photonic, electronic, transformative liquid-solid matter. They are ambiguous guardian spirits—strange, unsettling, and playful, yet potentially protective.
Also, they inhabit a liminal space between fear and fascination, disruption and protection.
Sound, light, moving images, physical materials, and electronic and spatial systems will be brought into a reciprocal process,
producing an ephemeral topology whose form remains open and continuously reconfigured.
It is both a media art installation and an instrument for live audiovisual performance.

– Mutating Materiality

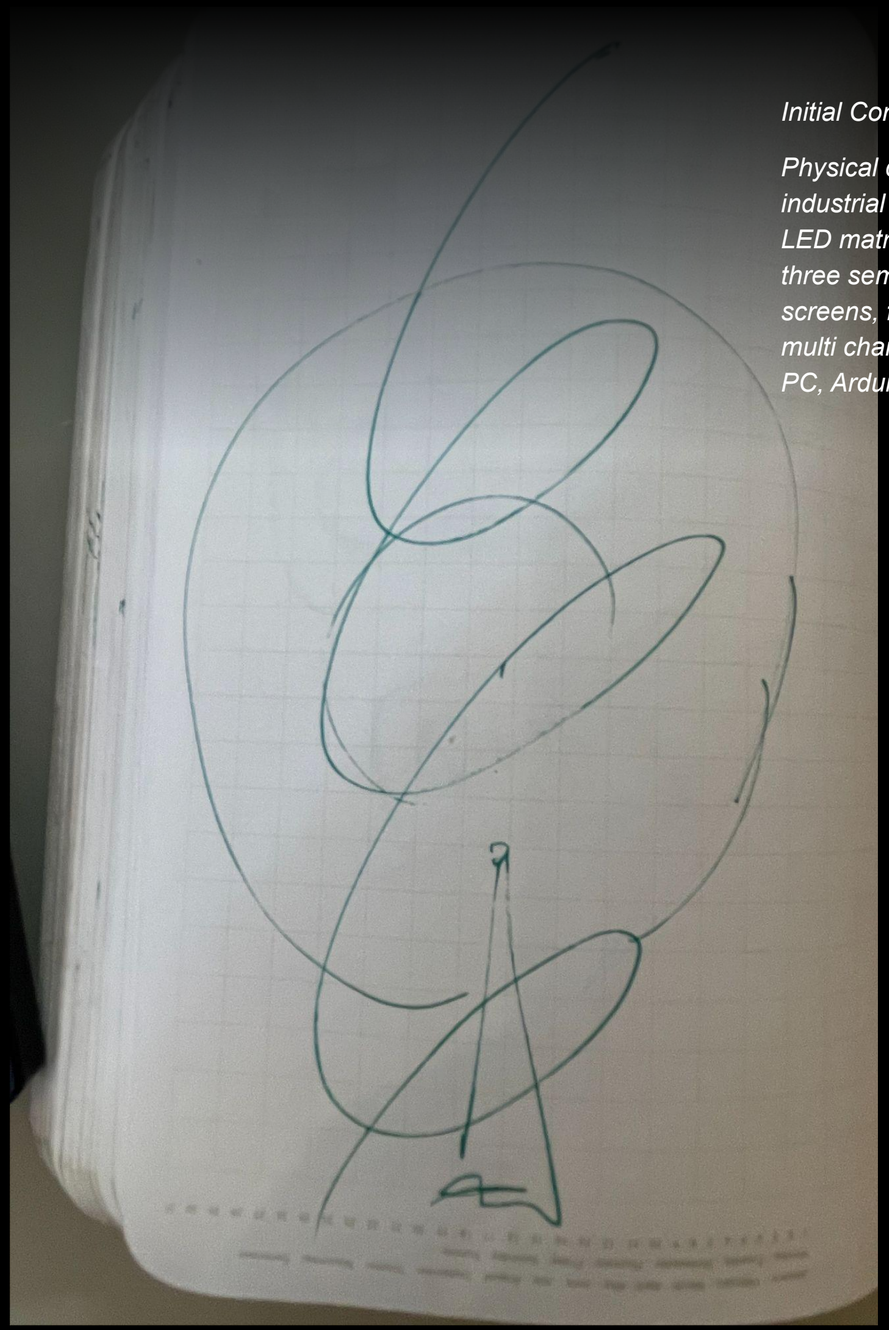

01. ***SoLiquid monster(s)***, *(In-progress)*
Physical Audiovisual installation & performance.

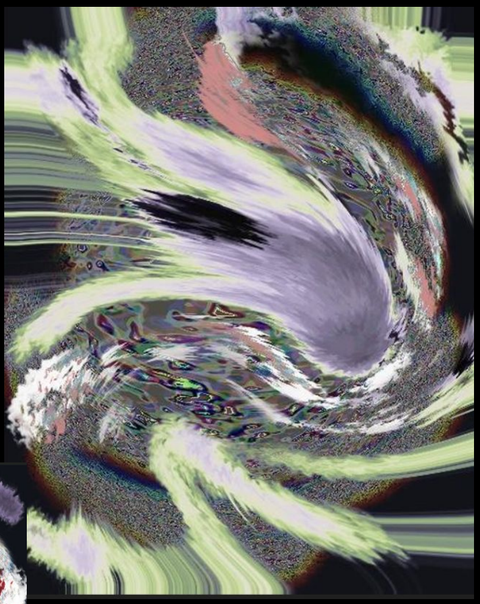

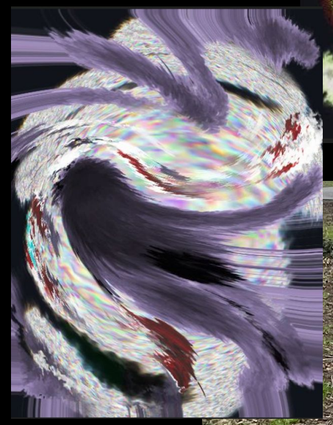

Initial Configuration :

Physical computing,
industrial metallic cables,
LED matrix (size TBD),
three semi-transparent circular screens, four projector,
multi channel speaker system,
PC, Arduino.

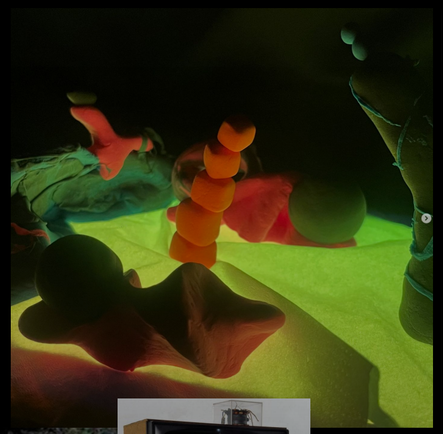

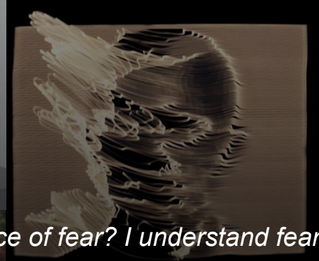

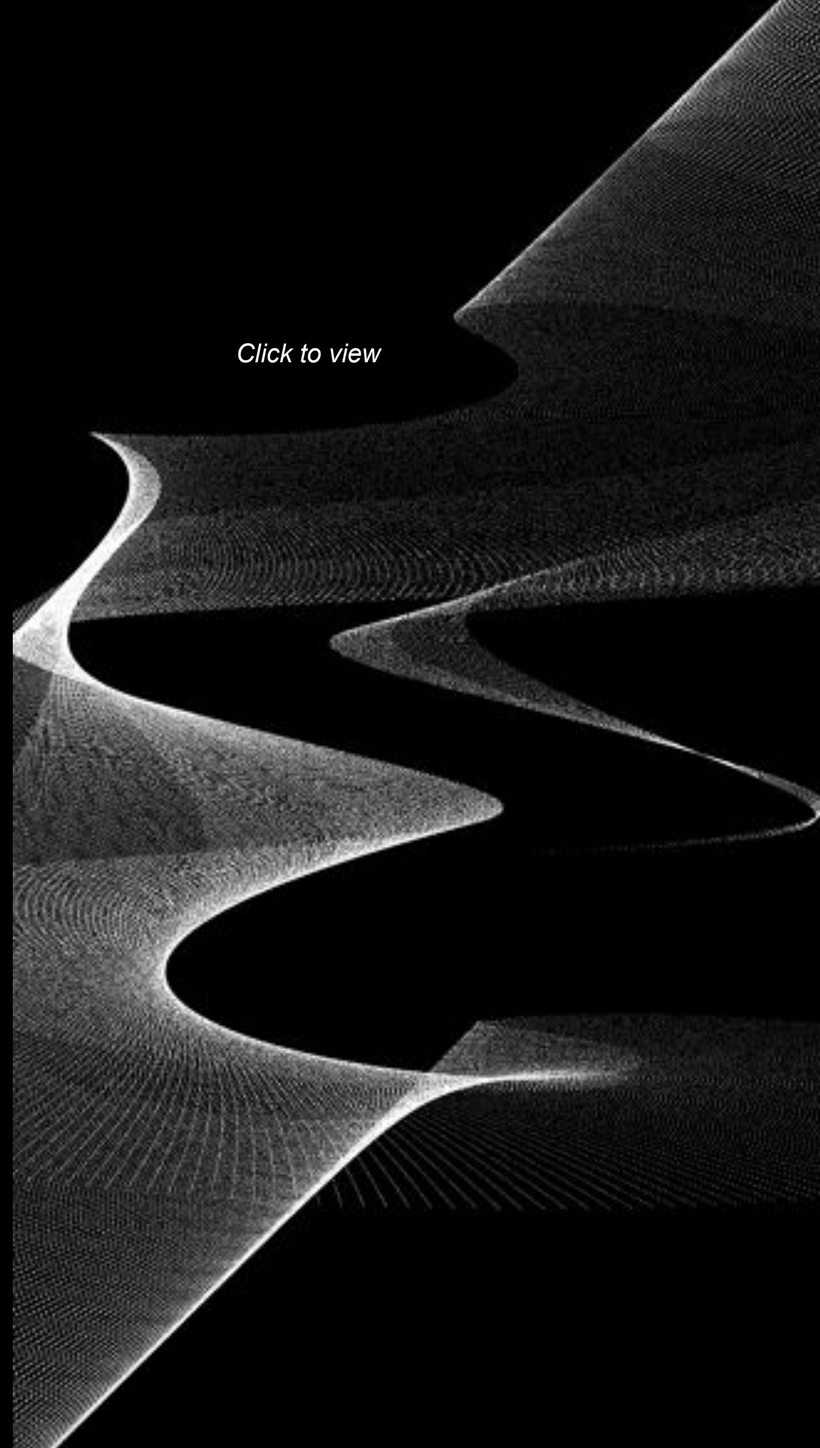

– Mutating Materiality

01. ***SoLiquid monster(s)***, *(In-progress)*

What is your source of fear? I understand fear as emerging from difference, the unknown and ever-changing nature.

What we cannot recognize or categorize can become a source of anxiety, leading us to enclose, classify, and control what lies outside established territories of perception. However, when these processes are transformed into data and algorithms, probability can come to be treated as truth, putting human agency at risk.

To rage against it, I am developing this monster as playful guardian spirits. Media instruments with a mutating materiality— noisy tricksters that question how perception is produced through classification, framing, and technological mediation. As it has throughout history, sound plays a central role in rituals of transcendence, and these monsters are no exception.

– Resonate Voicing

02. ***Human Machine Noise Feedback****, 2025.*

Audiovisual Projection, 2 min 10 sec & transformative feedback system.

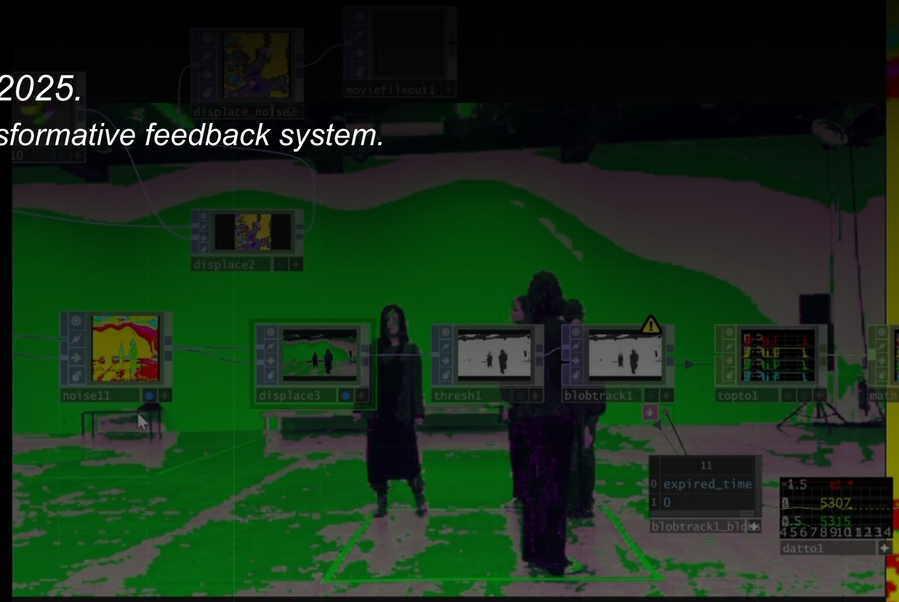

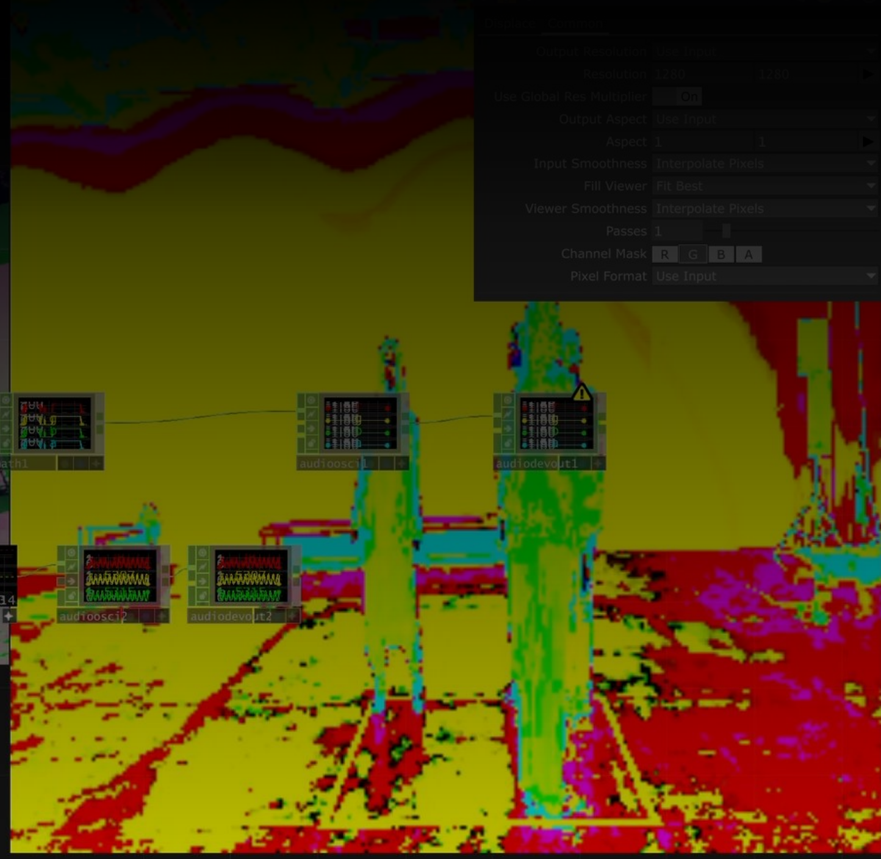

The artwork explores the possibility of making a computer “sing” through a feedback system between human performance and machine processing.
The artist-constructed system converts captured wavelengths into RGB data
according to spatial coordinates and transforms them into audio oscillators generating pure noise.

Projector, stero speakers, PC, Cables, Wavelength capture system, spatial coordinates,
RGB data processing, audio oscillators, feedback system, four-person performance.

– Resonate Voicing

02. ***Human Machine Noise Feedback***, *2025.*
Audiovisual Projection, 2 min 10 sec & transformative feedback system.

It approaches glitch as a transient moment within a continuous process of deconstruction, recomposition, and transformation, in which each rupture becomes a condition for further reconfiguration.

However, in the context of digital technologies, glitch can be simulated, controlled, and even programmed, turning unpredictability into an aesthetic parameter. This raises a question: can glitch still retain its subversive potential, or has it become a codified aesthetic? The work explores this question through the relationship between sound and image, and between human performance and machine processing. As signals operating through different regimes—temporal for sound and spatial for image—their interaction creates zones of friction and perceptual perturbation.

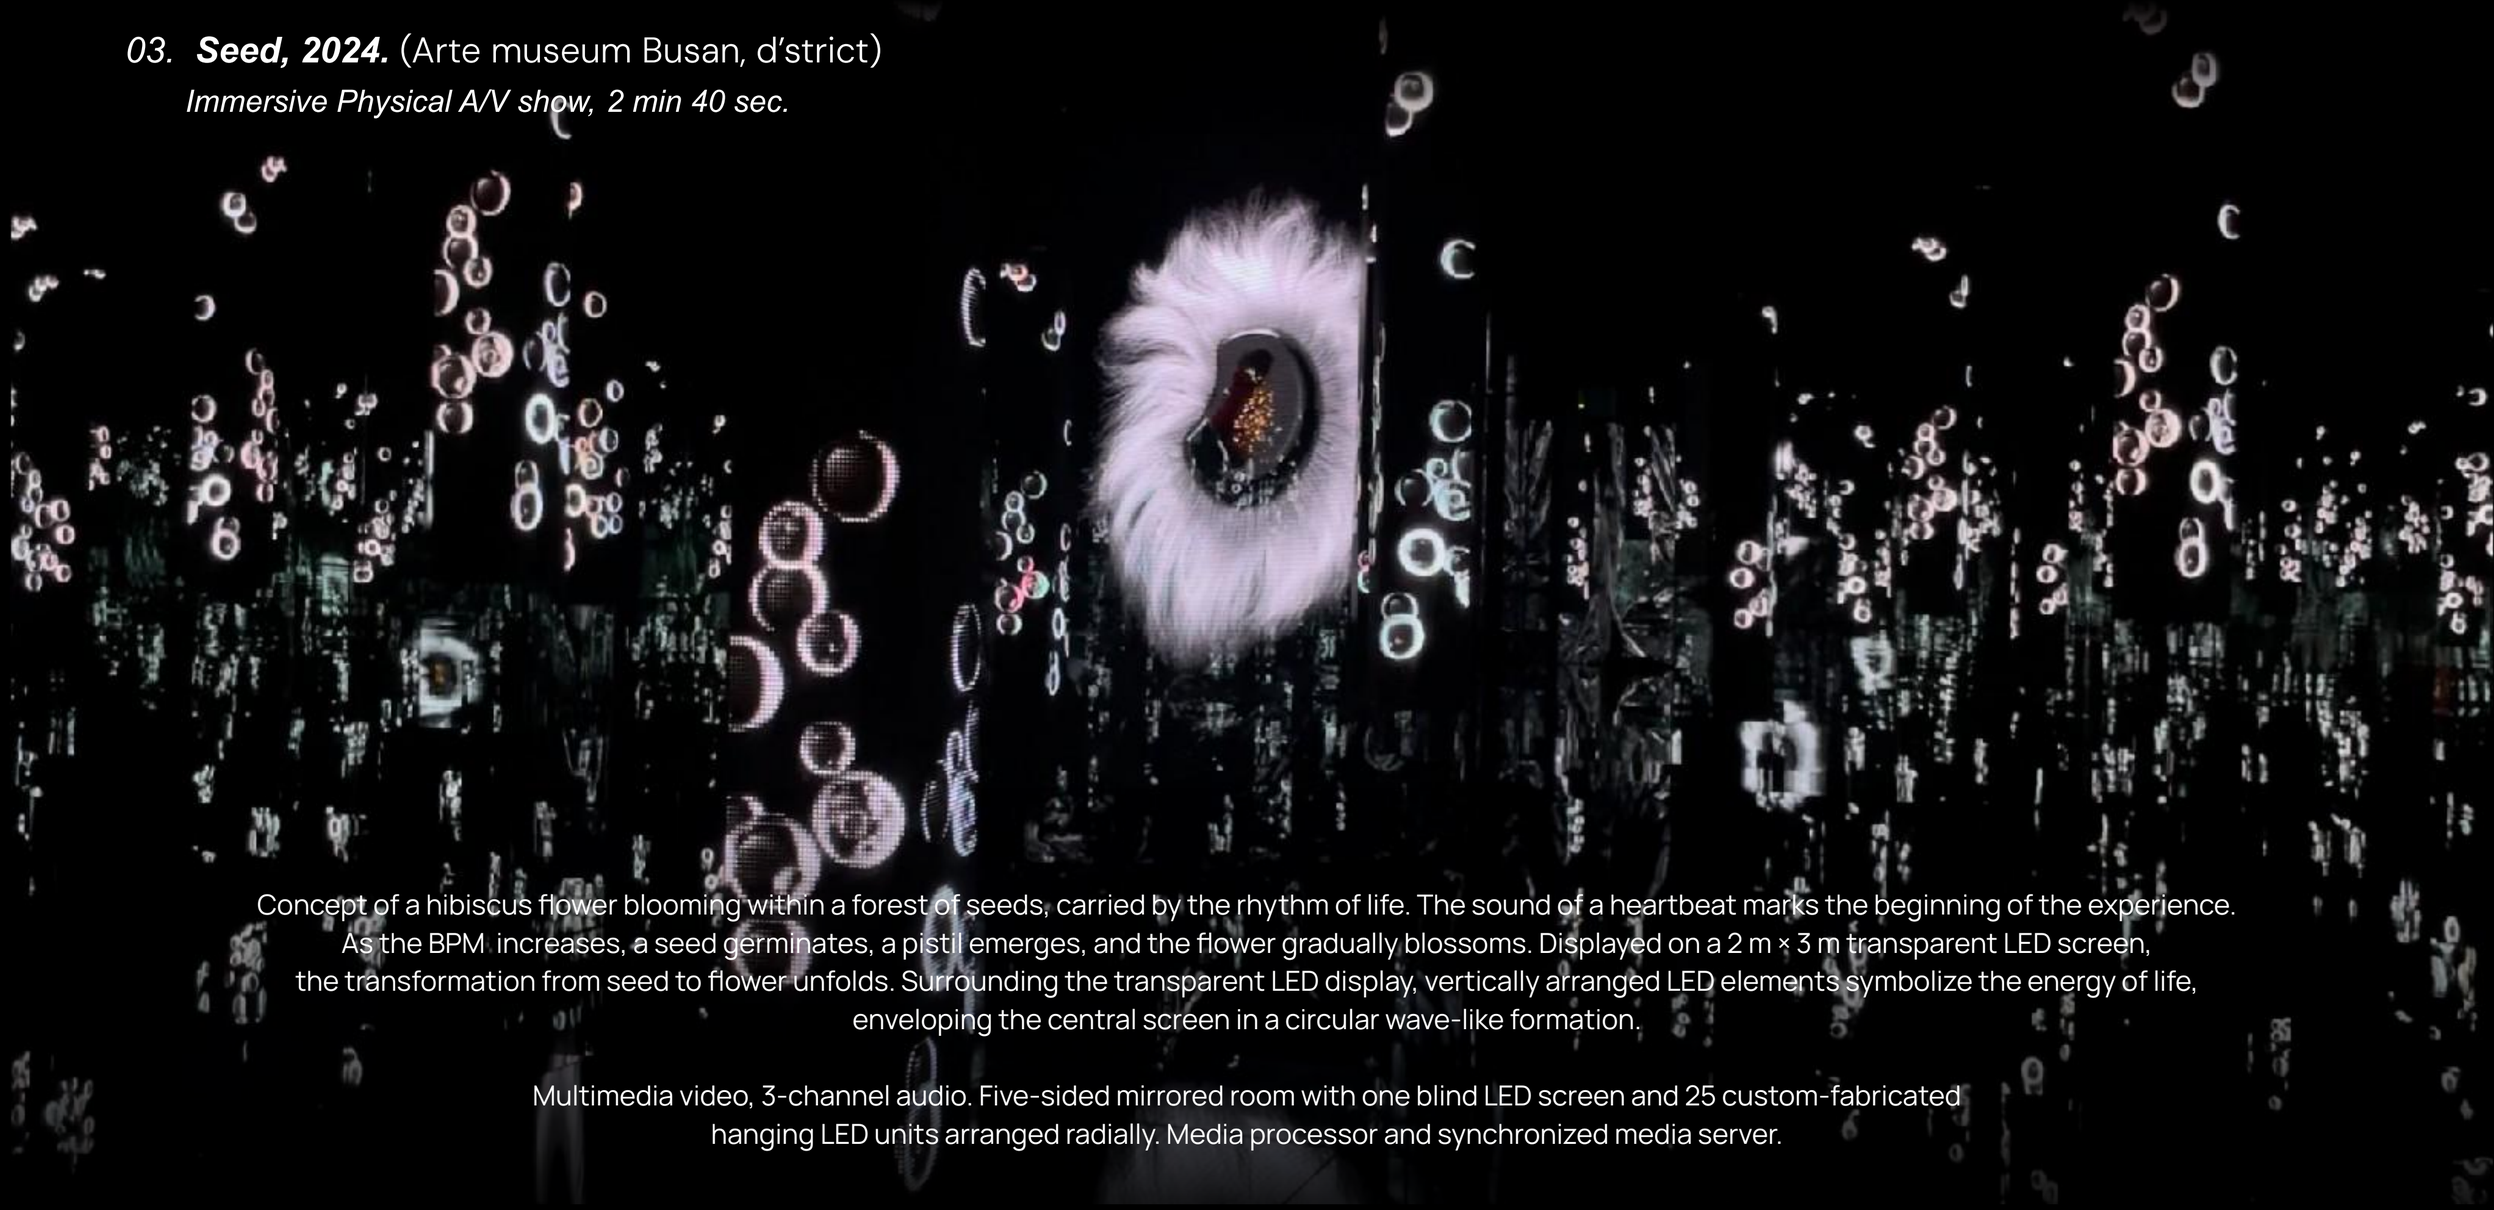

Glitch, noise, and feedback generate a cyclical process in which signal, image, and sound continuously transform one another. The resulting unstable and almost psychedelic sensory experience blurs the boundaries between human and machine, perception and data,
producing an audiovisual system in constant reconfiguration.

– Future Artefact Physical Media

03. ***Seed, 2024.*** (Arte museum Busan, d'strict)

Immersive Physical A/V show, 2 min 40 sec.

Concept of a hibiscus flower blooming within a forest of seeds, carried by the rhythm of life. The sound of a heartbeat marks the beginning of the experience. As the BPM increases, a seed germinates, a pistil emerges, and the flower gradually blossoms. Displayed on a 2 m × 3 m transparent LED screen, the transformation from seed to flower unfolds. Surrounding the transparent LED display, vertically arranged LED elements symbolize the energy of life, enveloping the central screen in a circular wave-like formation.

Multimedia video, 3-channel audio. Five-sided mirrored room with one blind LED screen and 25 custom-fabricated hanging LED units arranged radially. Media processor and synchronized media server.

– Future Artefact Physical Media

03. ***Seed, 2024.*** (Arte museum Busan, d'strict)

Immersive Physical A/V show, 2 min 40 sec.

Heartbeat, energy, life, electricity, seed, flowering, circulation….

This work creates a futuristic synthetic, but organic environment in which the rhythm of a heartbeat becomes a metaphor for the circulation of life and energy. Accompanied by rising techno beats and industrial textures, a seed containing the energy of life grows into a forest in which the hibiscus continuously blooms and regenerates. To embody the central concept of the heartbeat, four vertically structured LED cubes, resembling trees, were suspended radially around the inner corners of a mirrored room. Transparent LED surfaces inside the cubes reveal flowers emerging and transforming in response to the flow of energy. The combination of mirrors and transparent LEDs creates a seamless visual environment, extending the physical space and producing an immersive experience.

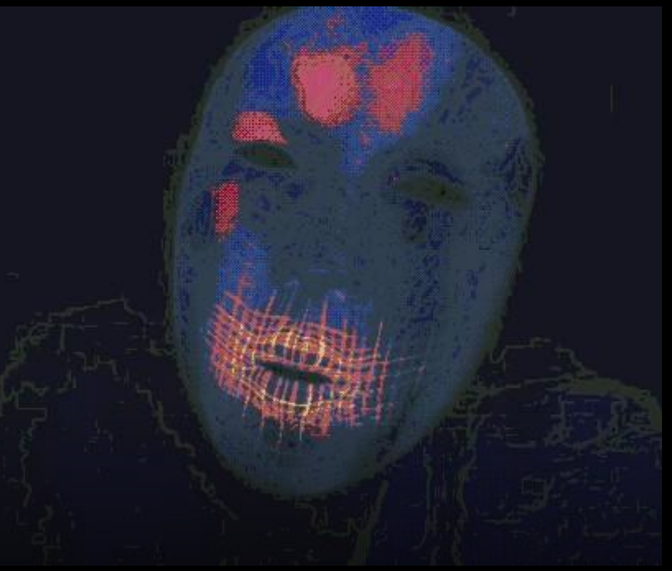

This was one of my favourite projects while working with d'strict in Korea, and my first attempt to integrate fabricated LED structures with moving-image-based audiovisual content rather than RGB lighting. A key challenge was developing a synchronized system in which each cube contained four independent LED screens that had to move in coordination with a large transparent LED surface. The project also required designing the hardware, spatial layout, and overall visual system within a limited budget. These technical and spatial constraints became an integral part of the creative process, shaping how the work could produce a sense of continuity, circulation, and immersion.

– From Vibration to Sound, then Music

04. ***Hey world, 2025.***
First Album consists of 8 music released.

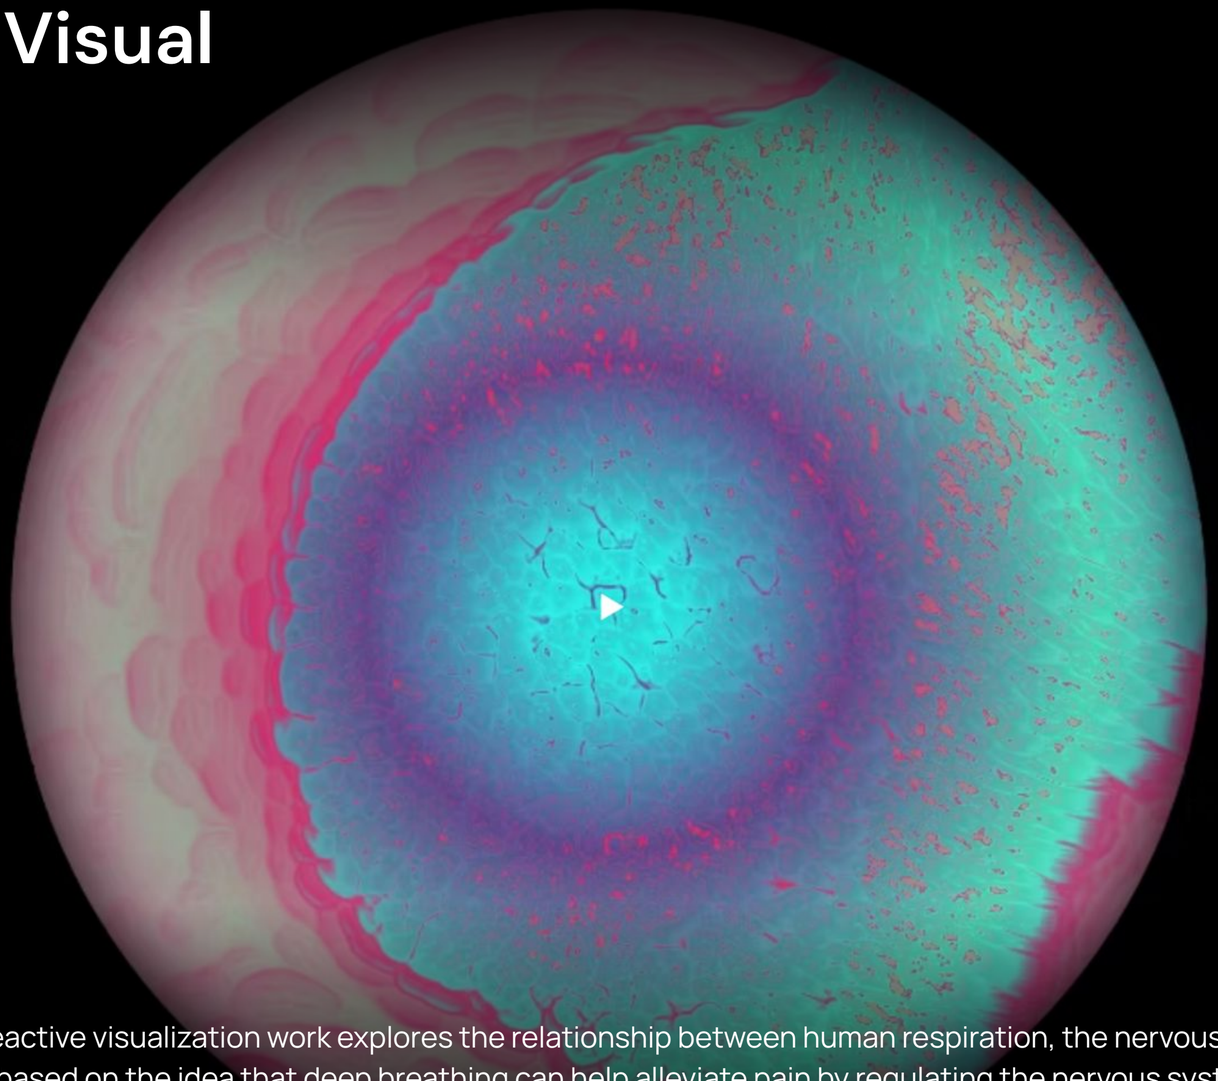

This first album was strongly influenced by imagine in which human and machine, nature and animal, the religious and the technological,
and past and future converge within a hybrid and indeterminate imaginary. These works have also shaped my interdisciplinary artistic vision deeply.

The album consists of eight electronic tracks drawing from glitch, dubstep, breakbeat, and techno, characterized by metallic textures and powerful bass lines
An invisible force seems to emerge and attempt to communicate with us.
It disrupts the rules of space and time, existing simultaneously as something synthetic and organic, while manifesting as a force that structures society.
It can also be understood as a tension between power, religion, and the human individual; between the wild, the body, and the spiritual.

– Audio Reactive Visual

05. ***Breath, 2019.***
Audiovisual video, 1 min 40 sec.
TouchDesigner, Ableton.

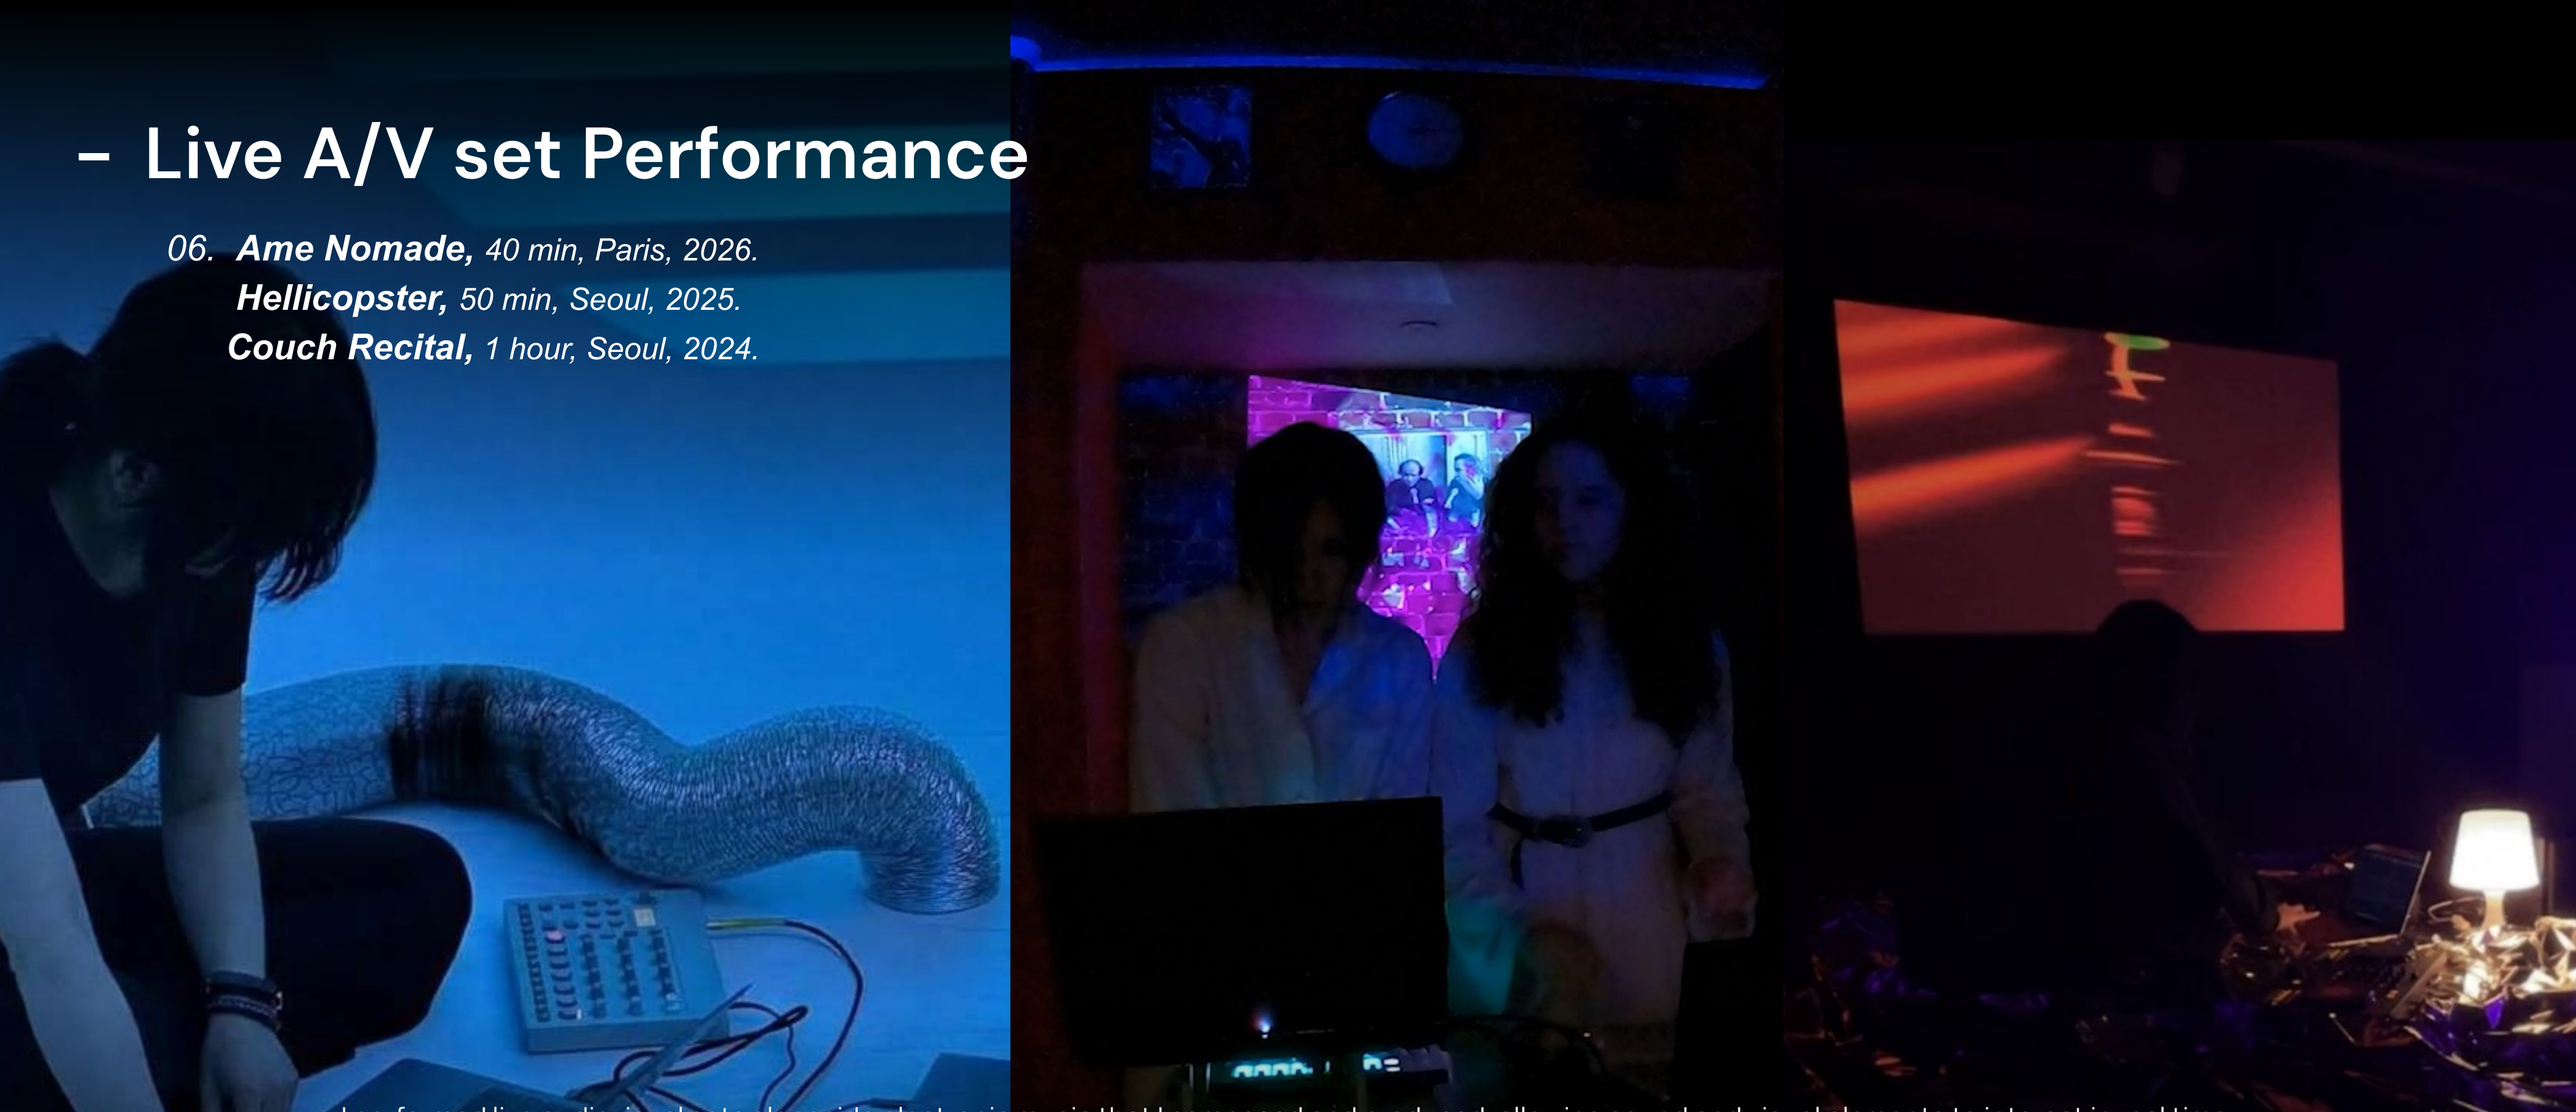

This sound design and audio reactive visualization work explores the relationship between human respiration, the nervous system, and bodily sensation.
It is based on the idea that deep breathing can help alleviate pain by regulating the nervous system.

To express the process of restoring neural balance through breathing,
Ii visualized waves propagating in circular patterns and the movement of particles, by building generative audio-reactive system on TouchDesigner.
Sound and image respond to one another, translating an internal physiological process into an audiovisual experience.

– Live A/V set Performance

06. ***Ame Nomade,*** *40 min, Paris, 2026.*
Hellicopster, *50 min, Seoul, 2025.*
Couch Recital, *1 hour, Seoul, 2024.*

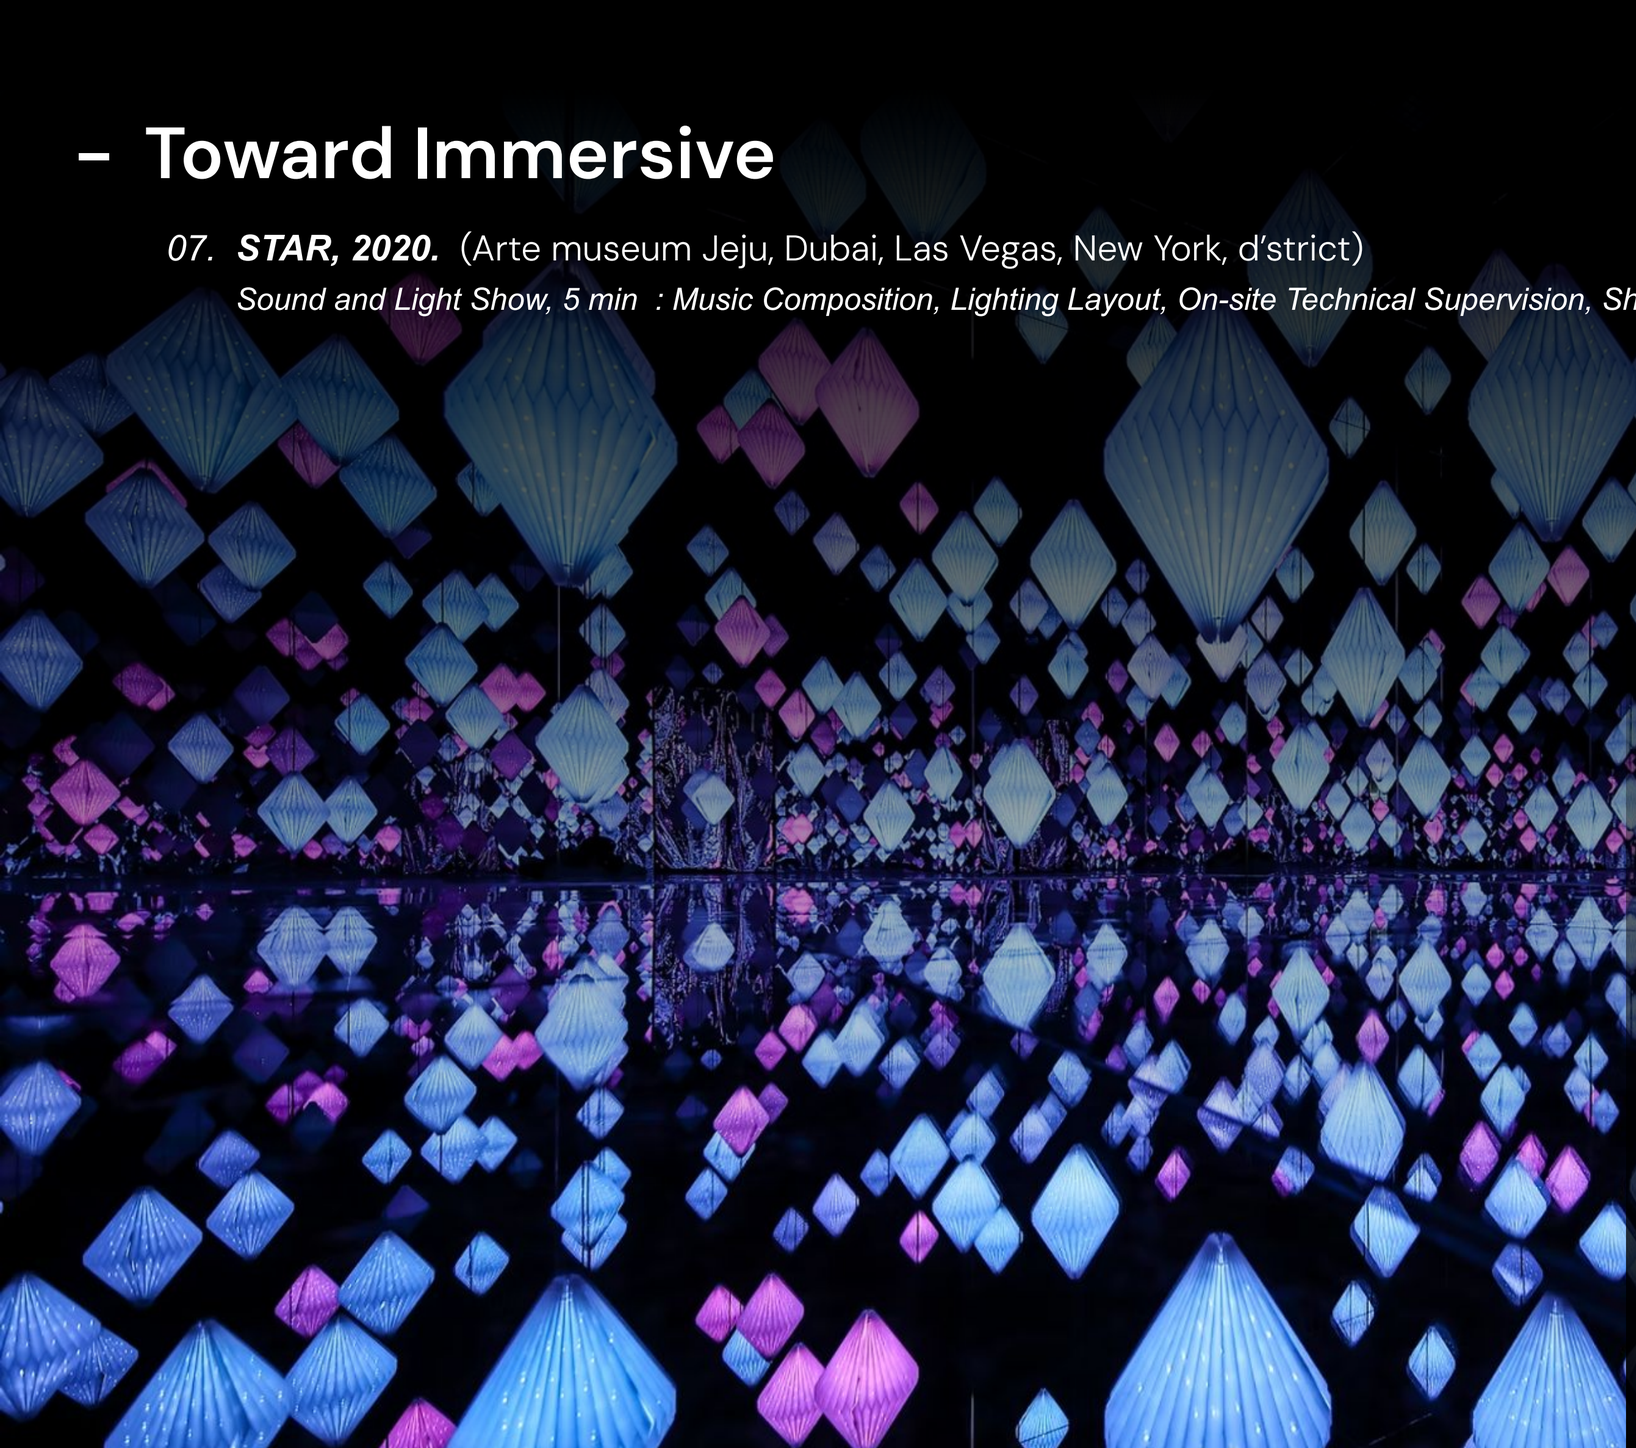

I performed live audiovisual sets alongside electronic music that I composed and produced, allowing sound and visual elements to interact in real time.
Each set composed of works characterized by ambient soundscapes, noise, glitch, bass, and metallic textures.
It required the development of a system connecting hardware and software, as well as the technical setup and calibration of the space for each performance.

Also, I explored light itself as a material, rather than treating projected images simply as visual content.
Light beams, spatial atmosphere, reflections, and changes in framing and perspective became active components of the performance.
The work therefore considered how light could shape the perception of space while sound, image, technology, and the audience's position continuously interacted in real time.

– Toward Immersive

07. ***STAR, 2020.*** (Arte museum Jeju, Dubai, Las Vegas, New York, d'strict)

Sound and Light Show, 5 min : Music Composition, Lighting Layout, On-site Technical Supervision, Show Direction

STAR is a sound and light show built around the theme of "Sailing in the Milky Way." Through three interconnected storylines, the work transforms paper structures, light, sound, and mirrored space into an immersive journey through the cosmos. The mirrored environment extends the spatial perception of the installation, while the light passing through and between the paper structures creates an ever-changing constellation.Here, light is a spatial and material element, choreographing its relationship with sound, architecture, reflection, and the audience's position.

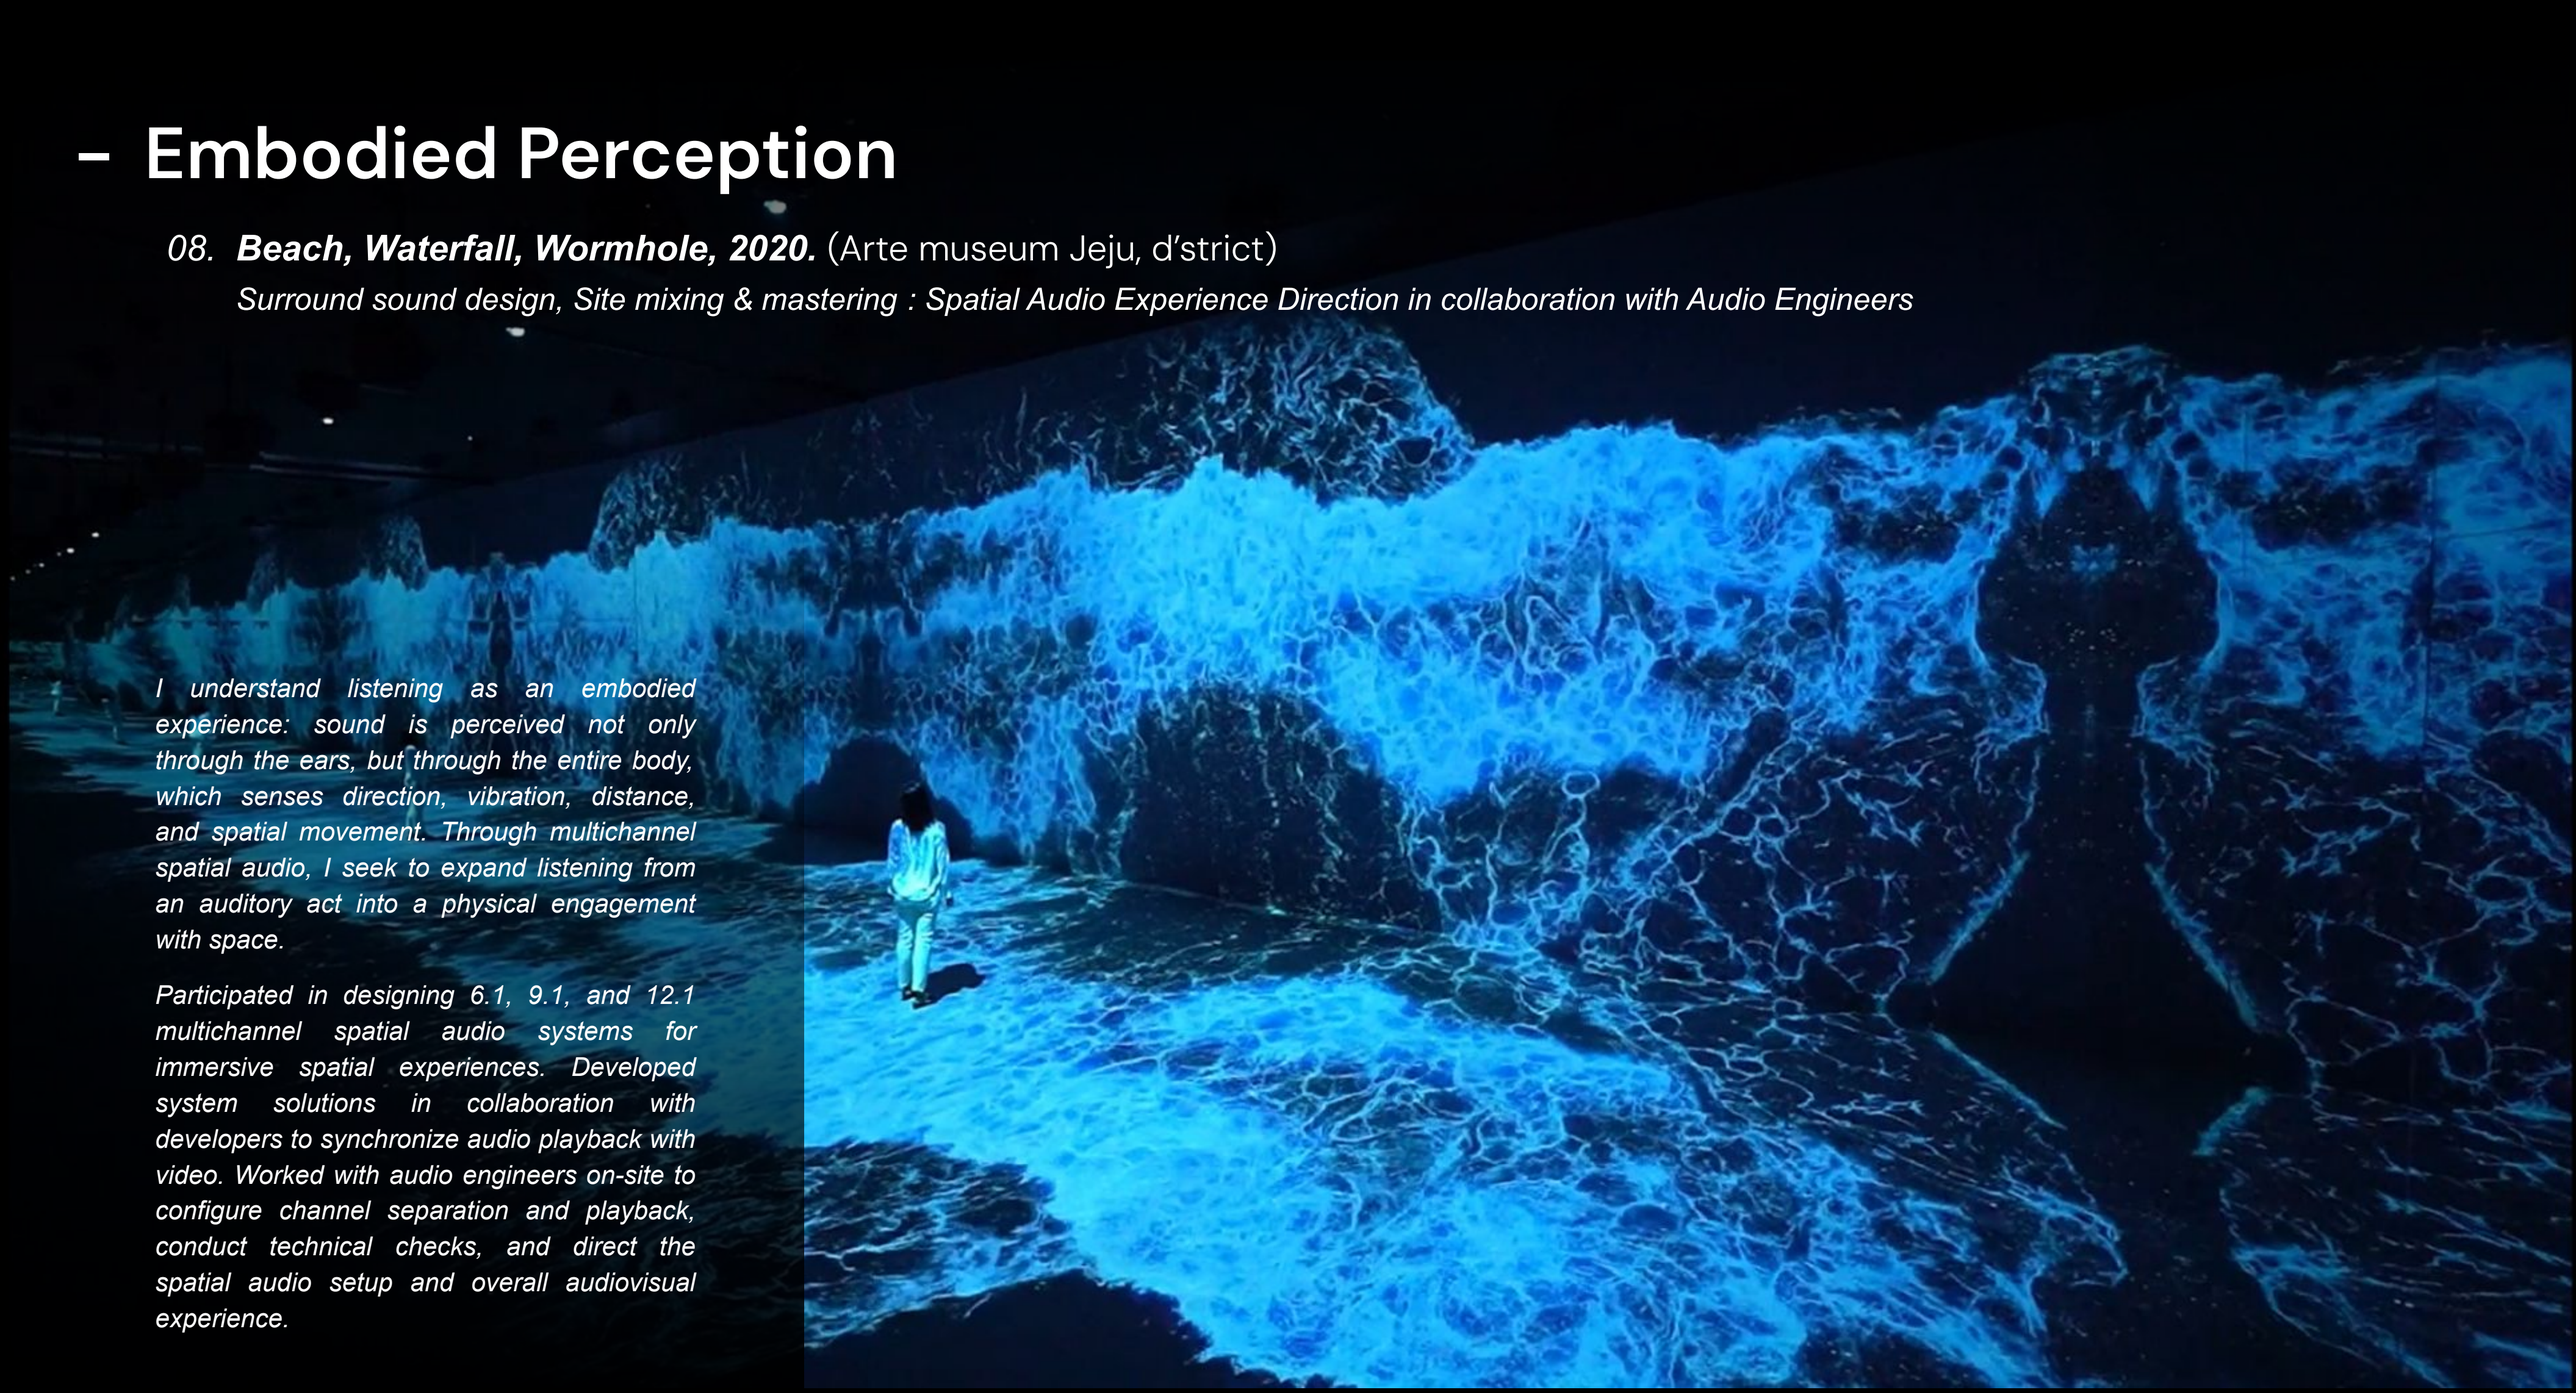

The journey begins with "Start of Journey," establishing a quiet and peaceful atmosphere before gradually transitioning into "Beautiful Space,"where colorful lights emerge between the paper structures and surround the audience. The final chapter, "Big Bang," introduces massive bass and intensified light, creating a more powerful and immersive atmosphere. 400 custom-designed paper light structures,

LED lighting system, 4-channel audio system, media player, DMX control system, SMPS, PC, mirrored surfaces.

– Embodied Perception

08. ***Beach, Waterfall, Wormhole, 2020.*** (Arte museum Jeju, d'strict)

Surround sound design, Site mixing & mastering : Spatial Audio Experience Direction in collaboration with Audio Engineers

I understand listening as an embodied experience: sound is perceived not only through the ears, but through the entire body, which senses direction, vibration, distance, and spatial movement. Through multichannel spatial audio, I seek to expand listening from an auditory act into a physical engagement with space.

Participated in designing 6.1, 9.1, and 12.1 multichannel spatial audio systems for immersive spatial experiences. Developed system solutions in collaboration with developers to synchronize audio playback with video. Worked with audio engineers on-site to configure channel separation and playback, conduct technical checks, and direct the spatial audio setup and overall audiovisual experience.

– Embodied Perception

09. ***ARTE MUSEUM X MUSÉE D'ORSAY, 2024.*** (Arte museum Las Vegas, New York, d'strict)

Immersive Projection & Audio, 20 min : Video & sound Conti, Concept Art for Immersive Scenes

Extensive research into different artistic movements and individual artists was essential to the development of the project. Because an immersive experience operates across both spatial and temporal dimensions, the criteria for dividing the narrative into scenes, the overall timeline, and the spatial concept and layout of each scene were all developed through research into the artworks, their historical contexts, and the relationships between them. Creating an immersive environment also required careful consideration of viewpoint, perspective, and spatial depth. Constructed as an approximately 20-minute timeline, the experience moves through a sequence of scenes in which changes in spatial arrangement drive the progression of time. Each scene introduces a distinct spatial configuration, allowing shifts in layout, perspective, and atmosphere to mark the passage from one moment to the next.

Accompanied by French classical music, It engages audiences deeply with artworks through a surreal experience that brings their historical and spatial contexts to life. The journey traces French art from Neoclassicism and Realism through Impressionism, Post-Impressionism, and Fauvism, organizing works through both artistic movements and individual artists. Beginning at the Musée d'Orsay, itself a former railway station, the narrative travels through the landscapes of Barbizon, a day unfolding across the streets of Paris, the Paris Opera Ballet at the Palais Garnier, the Moulin Rouge and its cancan, Giverny, the south of France and Tahiti, and finally the luminous stars of Arles, before returning to the museum.

01. ***SoLiquid monster(s)**, (In-progress)*
Physical Audiovisual installation & performance.

02. ***Human Machine Noise Feedback**, 2025.*
Audiovisual 2 min 10 sec & transformative feedback system

03. ***Seed, 2024.*** (Arte museum Busan, d'strict)
Immersive Physical A/V show, 2 min 40 sec.

04. ***Hey world, 2025.***
First Album consists of 8 music released.

05. ***Breath, 2019.***
Audiovisual video, 1 min 40 sec.
TouchDesigner, Ableton.
